

LAURUS TECHNOLOGIES IAM JUMPSTART FOR EDUCATION

HIGHER EDUCATION IDENTITY CRISIS

You have issues. Your users are constantly changing, as are the systems they access. You have a diverse technology infrastructure—and sometimes you don't even own the systems being accessed. Your student administration system is isolated from the library management and e-learning systems that share the same user base. Faculty and administration require access to grant management, HR, fundraising, research and all the other applications you support.

You not only worry about granting and revoking access to authorized users, but you also have to protect sensitive data from unscrupulous hackers, phishers and spammers with nothing better to do than complicate your life.

As your institution grows more diverse in geography and capabilities the challenges of managing your IT assets become increasingly unwieldy, yet you must ensure the security and privacy of your institution's data while enhancing user services and satisfaction.

IDENTITY AND ACCESS MANAGEMENT

Your challenges are solved with Identity and Access Management (IAM) solutions from Laurus Technologies. With our IAM Jumpstart methodologies you can fast track your institution toward security, compliance, management efficiencies and improved user satisfaction. And you can accomplish these goals in *under 5 weeks!*

Centralized provisioning/de-provisioning

- Align disjointed HR and IT processes eliminating duplication of effort.
- Improve security by ensuring timely de-provisioning of users.
- Improve efficiencies and security by automating user provisioning and de-provisioning at an enterprise level.

Password Management

- Reduce help desk calls related to password resets resulting in lower support costs and improved user satisfaction through self service password management.

Auditing and Reporting

- Simplify management through centralized reporting on the user provisioning/de-provisioning activities
- Protect sensitive data by tracking unauthorized user access.

LAURUS TECHNOLOGIES: EXPERTS IN IDENTITY MANAGEMENT

Laurus Technologies is the most experienced Identity and Access Management provider in the Midwest. Our knowledgeable and experienced consultants help you define, deliver, and manage your Identity Management projects — on time and within budget.

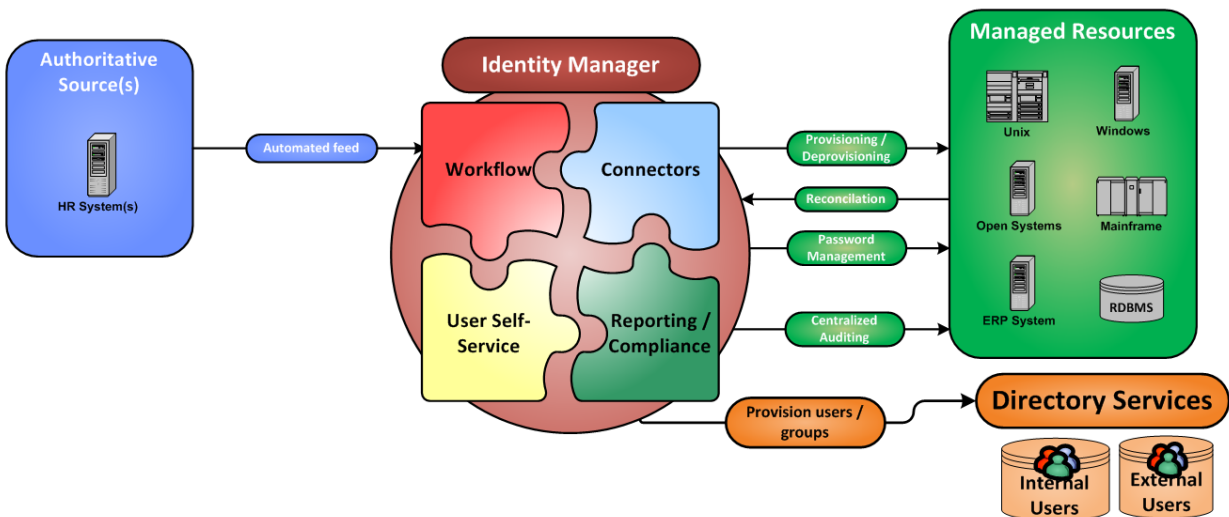

IAM JUMPSTART

We have crafted a service that quickly and affordably enables your institution to implement a technology foundation for Identify and Access Management—providing instant efficiencies, savings, security and improved user satisfaction.

IAM JUMPSTART from Laurus includes

- Implementation of an Identity Manager development environment
- Active Sync configuration with one authoritative source for user data
- Automatic provisioning to a directory (Active Directory or LDAP)
- User self-service password management including “Forgot Password”
- Help-desk password management
- Configuration of standard reports available out-of-the-box
- Assistance in testing and production deployment
- Documentation

We understand you have a complex and dynamic environment. We know how important it is to you to provide secure, compliant, and efficient access to your applications to your constantly changing user base. The answer doesn't have to be expensive. It doesn't have to take years to implement. It doesn't have to involve endless meetings developing campus policies nor do you have to send your staff away for weeks of training. Within 5 weeks you can improve security and compliance, increase user satisfaction, and reduce needless helpdesk calls.
